

## We Have Proof That Autologous Stem Cells Are Effective for Patients Over 65!

BY INGRID MACHADO,  
CEO of Miami Stem Cell®

Contrary to popular belief, at our Miami Stem Cell® Institute we have concrete evidence (based on the almost 7,500 procedures performed at our center and quantified in our extensive database), which includes almost 75% of patients over the age of 65, who were treated with their own Autologous Stem Cell Transplants and of

which an impressive 85% of them reported improvement. Furthermore, even many 65+ patients with severe grade IV degeneration in their joints still showed some recognizable improvement in their level of function and mobility and all without any risk of rejection or infection by simply using our signature “Super Marrow” Stem Cell Transplant Procedure.

While unfortunately, many medical professionals were somewhat skeptical about the true power of Stem Cell therapy in the past, Stem Cells have now taken center stage in the medical community at a global scale, since the healthcare industry is desperately trying to use every weapon in its armory to suppress the global threat from the COVID-19 pandemic. While investigating several different approaches at top medical institutions worldwide that include: vaccines, drugs, stem cells and even exosomes, mesenchymal stem cells (MSCs) in particular, are showing tremendous intriguing potential for the treatment of COVID-19.

MSCs are receiving notable attention because past studies have found the secretions from MSCs to be effective at treating

inflammation and cytokine storms. From early-stage studies, it appears that MSC may exert beneficial effects, potentially by improving the lung microenvironment, inhibiting immune system over-activation, promoting tissue repair, protecting lung alveoli epithelial cells, preventing pulmonary fibrosis, or improving lung function.

Stem Cells have consistently proven to be extremely effective at battling joint pain and we have broad data that reflects significant improvement regardless of the patient's age. I can still recall one our most famous cases, a fragile 90+ year old lady that her daughter came in with her to the initial consultation and basically begged us to do the Stem Cell Procedure on her mom. This patient was barely unable to walk (even with the assistance of her walker) and her doctor was unable to perform her much needed knee replacement surgery due to her complicated health issues, and she had basically exhausted all other options to control her pain. After we explained to the daughter that there were no guarantees (mainly because of the advanced age issue), we finally agreed to perform the Autologous Stem Cell Transplant on her mom and a few weeks later, we were amazed that she actually “walked” into our office (only 6 weeks after her procedure) without even requiring the assistance of her walker!

Therefore, if you are over the age of 65 and suffer from any

joint pain, come to Miami Stem Cell® one of the leading Stem Cell Institute in the United States, which has a Team of Experts composed of highly specialized doctors in Regenerative Medicine treatments. Learn how our amazing non-invasive treatments with your own Stem Cells are the most powerful ally to fight your pain without the risks of rejection, infection or complications, when compared to any type of invasive surgical procedure.

Finally, we want to reiterate that although many local doctors are consistently offering the new generation of Ortho-Biological products (which are derived from placenta or umbilical cord of donors) and while they work well on many patients, we have also found (based on our own patient data) that in order for these new products to be truly effective (in terms of the duration and level of pain improvement), these products are best when used in conjunction with transplants of the patient's own Stem Cells or their own PRP (Plasma Rich Platelets). On the contrary, when using these Biological Products alone, they basically work well to attack only minor degeneration / injury related pain and their overall results are for much shorter periods of time, than when combined with your own Stem Cells or PRP and often even regardless of the patient's age!

For more information on the array of services we offer, or to schedule a free evaluation with our Team of Experts, please call Miami Stem Cell® at (305) 598-7777 or visit: [www.stemcellmia.com](http://www.stemcellmia.com) You can also follow us on Facebook, Instagram & Twitter as well as watch our amazing testimonial videos on our YouTube channel
